

If you're not using the Calyx Network

**you're paying too much  
for too little.**

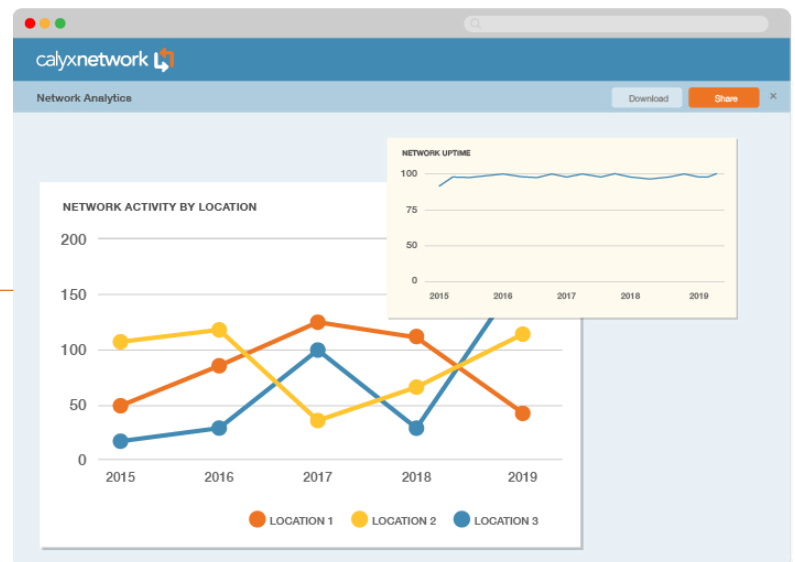

### Realize immediate cost savings

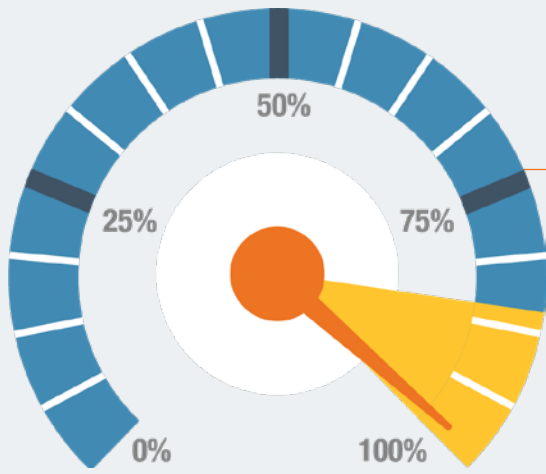

Do more with less by eliminating costly MPLS and site-to-site and leveraging commodity internet via SD-WAN. Add resiliency by aggregating lower-cost connections.

### Increase visibility and control

- Set policies to block access to specific websites or categories of sites
- Capture, review and monitor for traffic on any network-connected device
- Build access policies for guest network access; require authentication or registration for access, and set specific logon times, timeouts or hours
- Throttle connections to specific sites, resources or machines to ensure no user consumes all bandwidth and resources

**Calyx Network shifts your IT costs to where they'll be more effective by aggregating commodity internet services and eliminating complex services like MPLS, Metro Ethernet and point-to-point connections.**

### Increase site resiliency and reduce downtime

- Any type of internet connectivity can be leveraged (fiber, coaxial, Ethernet, DSL etc.) for higher availability
- 4G connectivity available as a backup/failover in the event of a network outage on primary circuits
- Inter-site connectivity maintained over any connection, automatically

### Fully managed, exceptional Calyx support

No self-administration required. Calyx handles monitoring, maintenance, proactive troubleshooting, predictive failures and replacement of hardware before a failure occurs.

- Single management portal
- Next-day hardware replacement
- Alerts for down sites, loss of redundancy and traffic alerts and alarms

### Some of what's included in your Calyx Network Subscription:

#### Hardware

- Security appliances, switching and wireless access points included
- All hardware warranties, licensing and subscriptions included
- Next business day replacement for failed equipment
- Advance replacement for predictive failures
- Devices automatically replaced when upgrades needed – no cost to you

#### Security

- Next-gen firewall
- Intrusion Detection Services and Intrusion Prevention Services (IDS/IPS)
- Content filtering for all traffic
- Advanced Malware Protection with AI and Machine Learning to prevent threats

#### Support

- Fully managed from internet to endpoint device
- Vendor liaison – never call your ISP again
- Configuration management for all devices
- Real-time reporting of traffic statistics
- Single pane of glass for rapid identification of issues

#### Connectivity

- SDWAN for multi-site connectivity
- Multi-WAN capability for redundancy
- Cellular backup capable
- Automatic failover of all services between ISP connections
